

PAK/TEEM, INC.

Industrial Ventilation

PAK/TEEM is a premier provider of industrial ventilation systems for processes that generate dust, aerosol, fumes or vapors. We specialize in providing local exhaust ventilation for dry material handling, liquid processing, and product packaging lines. With these systems we contain and capture dust and spilled product and, where product specifications allow, recycle the collected material back into the process. We also have extensive experience in providing dust control for paper making and converting lines. By having our own sheet metal fabrication facilities, we can offer turnkey design, fabrication, installation and start up of your ventilation system. If desired, we can also provide plant maintenance personnel with training that will enable them to maintain the ventilation systems and keep the system operating at design specifications.

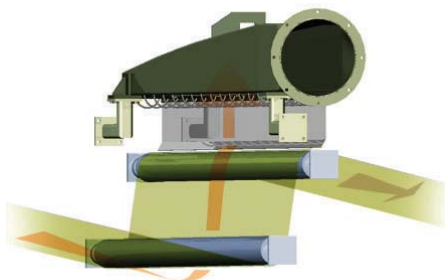

Services

- Engineering and design or complete turnkey services
- Dust control systems
- Aerosol control systems
- Odor control systems
- Central vacuum cleaning systems
- Custom close capture hood design
- Air flow balancing
- Troubleshooting and analysis
- Monitoring and maintenance programs
- Area and personnel air sampling
- Training

Features & Benefits

- Airborne contaminant reduction
- Process/material handling changes to minimize or eliminate dust/aerosol generation
- Product recovery and recycle
- Increased process reliability
- Reduced air flow requirements
- Reduced operating costs
- Operator access to equipment is maintained

Industries Served

- Towel and tissue production
- Diaper converting
- Feminine hygiene converting
- Soap and detergents
- Pharmaceuticals
- Foods
- Chemicals
